

Large Format Scanning

High quality scanning in black and white, grayscale or in full colour for documents up to A0+ in size.

For 30 years, Document Options have been capturing drawings and plans for our customers, historically to microfilm, nowadays more and more drawing archives are being scanned to electronic format. We have a long standing specialist experience in these applications.

Reduce Storage Space:

Drawing tanks and Plan chests take up valuable office space that could be used to give way to more productive activities, not to mention the cost of office space. Typically we can fit around 5,000 monochrome A1 sized drawings onto a single CD-ROM.

Increase Access and Search Times:

Scanned drawing files can be indexed by multiple references and stored on a database on your network. This will enable your staff to access the documents logically and quickly without having to leave their workstation.

Increase Portability:

Scanned images can be emailed and printed out on any wide format printer or made available via your organisation's Intranet site. Some of our clients in the utility sector use handheld devices to access thousands of scanned images that we have produced, databases of the maps are kept up-to-date by synchronising using remote docking stations.

Vectorisation:

Scanned image files or "raster" images can be vectorised. This is a process whereby the images are fed into a software application which recognises the lines, curves and text on the page and converts them into electronic text and vectors that can be manipulated using a CAD package.

"Typically we can fit around 5000 A1 drawings onto a single CD-ROM"
