

Rare Document Scanning

We are able capture valuable or delicate documents of any size using our state-of-the-art rare document scanner.

Using traditional scanning technology, documents need to be passed through the moving parts of the scanner to be captured. This is acceptable for clean “business type” documents, but typically historic items or valuable originals are considered to delicate to risk damaging during the scanning process.

Our custom built rare document scanner is able to scan any document up to several square metres in size and can capture in monochrome, grayscale or in full colour.

Book Scanning:

Bound documents that need to be preserved in their original format can now be captured using our machine. A specialist 110 degree book cradle is used, which allows the pages to be captured with the minimum stress on the original binding.

X-Ray Scanning:

A customised light-box enable us to capture X-Rays and transparencies with amazing image quality.

Map Scanning and Tith Maps:

Full colour images can be produced from any maps that you have. A speciality of ours is converting Tith maps; very old, delicate and unusual size maps. Using industry leading image manipulation software we are able to capture documents of many square metres in size in stages and then electronically “stitch” them back together. Free demonstrations are available.

Reproduction:

Our professional reprographics division is able to reproduce these images, no matter what size they are in black and white or full colour and to superior quality. Full demonstrations of all these techniques are available by contacting us.

“Documents of several sq. metres can be scanned and stitched together”
